

WELCOME TO THE "CUTTING EDGE OF GREEN CONSTRUCTION TECHNOLOGY"!

Thermagreen Steel Structures manufactures steel insulated panels (SIPS) for construction. Our system combines the strength of steel with the superior insulating and acoustical values of expanded polystyrene, both of which are 100% recyclable.

For Architects, Builders, or Homeowners our Thermagreen panel system saves time and money in all stages of design and construction. Owners of our system realize significant energy savings for the life of the building.

THE THERMAGREEN SYSTEM

- Stronger than conventional construction
- Saves up to 40% energy savings
- Tested & proven to be hurricane resistant in hurricane prone areas
- Mold resistant
- Not a food source for termites
- Meets & exceeds building codes (ICBO, BOCA, SBCCI, HUD, South Florida)
